# **Avoiding Surface Defects on Exterior Slabs**

# **Causes of Surface Defects**

#### 1. Premature finishing

- a. Finishing bleed water, added water or rain water into the surface Creates soft, weak surface prone to premature wear and scaling
- a. Trapping bleedwater and air beneath surface Creates weak zone beneath surface - top surface prone to scaling

# 2. Overworking the surface (especially wet concrete)

a. Damages the air void system along the top surface Reduces freeze/thaw resistance – increases risk of scaling

#### 3. Late Finishing

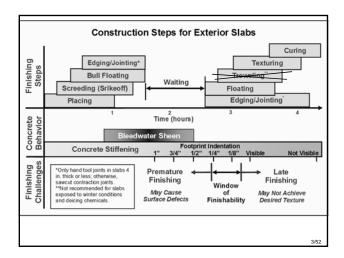

May not achieve desired surface texture

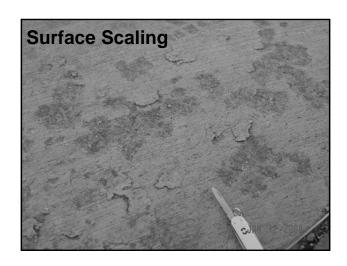

# 4. Inadequate Curing

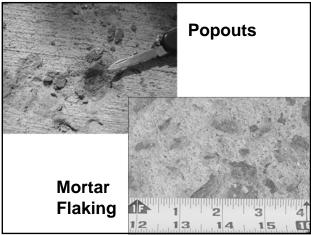

Plastic shrinkage cracking Surface crusting Mortar flaking

Premature surface wear and increases risk of scaling

2/52

# **Minnesota Concrete Council**

www.mnconcretecouncil.com Midland Hills Country Club, May 8, 2014

# **Scaling Causes**

- 1. High w/cm ratios too much water
- 2. Inadequate air void system
- 3. Improper finishing
  - · finishing water into top surface
  - · trapping bleed water
  - · overworking of wet concrete
- 4. Inadequate curing & air drying
- 5. Exposure
  - · deicing chemicals
  - poor drainage
  - · early age freezing & thawing

# Effects of Deicing Chemicals 1. Increases degree of surface saturation 2. Exacerbates effects of osmotic & hydraulic pressures within pore structure 3. Increases the number of freeze-thaw cycles 4. Thermal shock 5. Layer by layer freezing due to salt gradients 6. Possible salt crystal growth in pore structure

# **Avoiding Surface Defects on Exterior Slabs**

#### **International Building Code (IBC)** Mix Requirements **Exposure Condition** Max. w/cm Min. f'c ratio (psi) (from ACI 318 Building Code) Concrete intended to have low permeability 0.50 4,000 when exposed to water Concrete exposed to freezing & thawing in a moist condition or to deicing chemicals 0.45 4,500 For corrosion protection of reinforcement in concrete exposed to chlorides from deicing chemicals, salt, salt water, seawater, or 0.40 5,000 spray from these sources

# Resistant Concrete (IBC, ACI) Max. Aggregate Size (inch) Air Content, percent\* Severe exposure Moderate exposure 3/8 7.5 6.0 1/2 7.0 5.5 3/4 6.0 5.0

**Total Air Content for Frost** 

* Tolerance = ± 1½ % (or consider -1.0% & 2.0%)		
11/2	5.5	4.5
1	6.0	4.5
3/4	6.0	5.0
1/2	7.0	3.3

Kim Basham, PhD, PE, FACI KB Engineering, LLC 307/635-7240 kbasham@KBEngLLC.com

# Adequate Air-entrainment

# **Air Void System**

- 1. Amount of air voids
- 2. Spacing factor
- 3. Size of the bubble

Provides freeze/thaw resistance by providing means to relieve <u>hydraulic</u> pressure

 $\textit{Water} \implies \textit{Ice} \implies 9\% \; \textit{Expansion} \implies \textit{Entrained Air} \implies \textit{Relieve}$ 

## **Minnesota Concrete Council**

www.mnconcretecouncil.com Midland Hills Country Club, May 8, 2014

# **Petrographic Analysis**

# Air void analysis

- total air content
- spacing factor
- bubble size

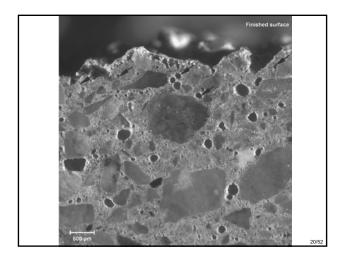

## w/cm ratio

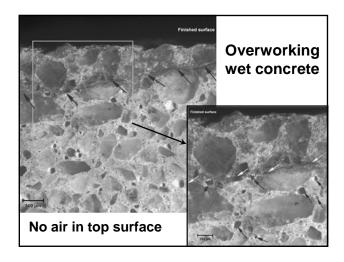

- at surface vs. body

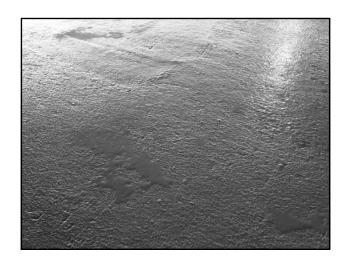

# Finishing defects

- premature finishing
- soft surface from adding water or finishing bleedwater into surface
- overworking surface

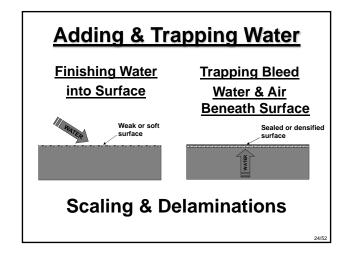

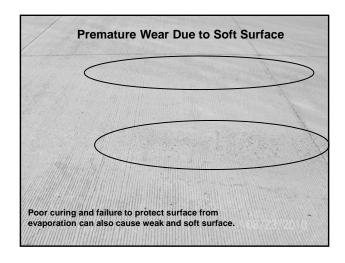

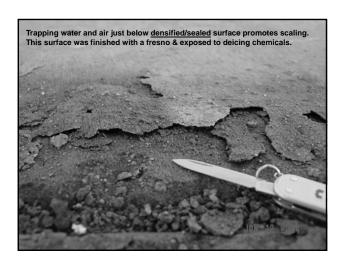

www.mnconcretecouncil.com Midland Hills Country Club, May 8, 2014

# **How to Handle** Rained-on **Concrete Pavements**

- Wait Don't place concrete if chance of rain or thunderstorm
- Cover- Try to protect
- Sit in truck Hope for the best!

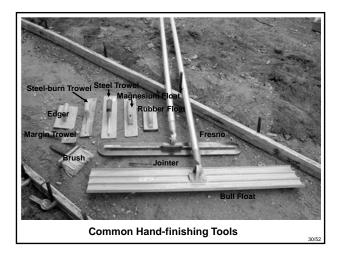

# Do NOT Finish Rainwater **Into Concrete Surface**

# 1. Remove Rainwater

• Broom, squeegee, use air compressor or water hose to remove surface water

# 2. Repair Surface

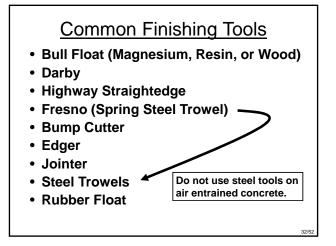

- Bull float or float surface to remove damage
- · Don't finish rainwater into surface

# **Minnesota Concrete Council**

# **Proper Curing**

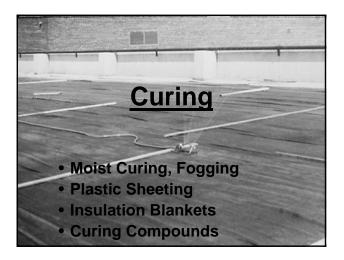

# Increases ...

- Strength
- Watertightness
- Abrasion resistance
- Freeze-thaw resistance
- Resistance to effects of deicing chemicals
- Volume stability

# **Minnesota Concrete Council**

www.mnconcretecouncil.com Midland Hills Country Club, May 8, 2014

#### Minnesota Concrete Council

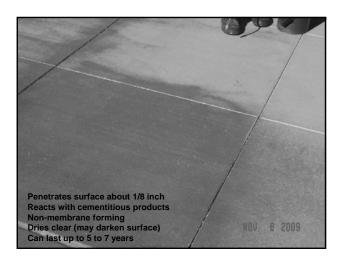

www.mnconcretecouncil.com Midland Hills Country Club, May 8, 2014

# **Late Fall Curing Options**

- Use sheet (plastic) or insulation blankets for 7 days; air dry for 21 days; optional apply silane or siloxane penetrating water repellent
- 2. Use exterior grade spray-on cure/sealer

49/52

# **Checklist for Finishing Ext. Concrete**

- Use 4,500 psi concrete (max. w/cm = 0.45)
- Use properly air entrained concrete (6%±1.5% air for ¾" rock)
- Don't exceed max. w/cm when adjusting slump
- Don't retemper (add water after discharging part of load)
- Don't spray water on surface during finishing
- Don't finish bleed or rain water into surface
- Don't overwork surface & damage microscopic air bubbles
- Don't finish too soon or trap bleed water below surface
- Use proper finishing procedure & <u>don't prematurely seal</u>
  <u>surface</u> (keep tools flat as possible, avoid using steel tools)
- Protect surface from rapid and early moisture loss
- Cure & protect from early freezing
- Provide drainage minimize exposure
- Consider using a silane, siloxane or a cure/seal material

# For new concrete...

- 1. Specify a max. w/cm ratio of 0.45
- 2. Specify a min. concrete strength of 4,500 psi
- 3. Specify total air of  $6\% \pm 1.5\%$  air for  $\frac{3}{4}$ " rock
- 4. Specify drainage slopes (1% min., 2% preferred)
- 5. Specify no steel finishing tools for exterior slabs
- 6. Specify and enforce curing requirements
- 7. Consider special curing for late fall placements
- 8. Consider using silane, siloxane or cure/sealer
- 9. Don't use deicing chemicals 1st winter used sand
- 10. Contractor's warranty?

53/52

# The Owner's Circle For existing concrete...

#### 1. Have a snow removal plan

- a) Remove snow totally from concrete
- b) Do not allow snow melt to drain across concrete
- c) Gutters and roof drains?

#### 2. Minimize use of deicing chemicals

- a) Use sand for traction not deicing chemicals
- b) Premix sand and deicing chemicals together for workers to use

## 3. Correct poor drainage areas

a) Good drainage is key factor for reducing risk of scaling

#### 4. Use silane or siloxane sealers

- a) Remember water is the enemy!
- b) Should be applied every 4 to 6 years

54/5
